Pet Health & Veterinary Guide

Pet Radius • Vaccinations, Preventive Care & Emergency Signals

Proactive medical care keeps your pet protected against preventable diseases and helps identify health concerns early before they become critical.

1. ESSENTIAL VACCINATION SCHEDULE

SPECIES	CORE VACCINES (ESSENTIAL)	NON-CORE (LIFESTYLE-BASED)
Dogs	Rabies, DHPP (Distemper, Hepatitis, Parvovirus, Parainfluenza)	Bordetella (Kennel Cough), Lyme, Leptospirosis
Cats	Rabies, FVRCP (Rhinotracheitis, Calicivirus, Panleukopenia)	FeLV (Feline Leukemia Virus)

2. ROUTINE PREVENTIVE MAINTENANCE

Flea, Tick & Heartworm Prevention

Administer monthly oral or topical preventatives year-round. Heartworm is transmitted by mosquitoes and requires lifelong prevention.

Annual Wellness Exams

Schedule yearly vet visits for adult pets (bi-annually for seniors 7+) to perform fecal tests, dental checks, and routine bloodwork.

3. WHEN TO CONTACT A VET URGENTLY

Immediate Emergency Signals

Seek immediate veterinary emergency care if you observe: difficulty breathing, collapse, inability to urinate (especially male cats), pale gums, ingestion of toxic items, or continuous vomiting for over 24 hours.
